

HUNTING FOR LIFE

It was really good hunting for things. It was hard to know if cardboard was never alive or dead because it is made from trees. It was quite hard, but a really fun science lesson.

Laura & Caleb (Fox Class)

OPEN THE BOOK

We learnt the story of "The beginning" and we got to act out the seven days of how God made the World. We felt a little bit nervous at the start, but our nerves stopped when the acting started. We felt really happy that we got to take part because the Open The Book cast were really nice to us.

STRAIGHT TO THE HEART

RECEPTION

This week in science we dissected a lamb's heart. We saw lots of veins inside and despite what we thought, there wasn't much blood. It felt cold, squidgy and slimy, and it stank of raw meat. Inside the heart, we saw the right and left atrium and ventricle. It was better than what we expected. Overall, we had a really good lesson. *Jemima L & Ina (Potter)*
